

FOR IMMEDIATE RELEASE

MIST Innovations Inks Distribution Agreement with Protektar Sa de CV

Detroit, Michigan, United States of America (Free-Press-Release.com) May 23, 2011 – MIST Innovations, Inc., a leader in developing network security monitoring devices, announced it has signed a distribution agreement with Protektar SA de CV to be the exclusive distributor of MIST's flagship product MISTonDemand II (MoD II) throughout Mexico.

The innovative MoD II system provides businesses complete, convenient and secure access to their video surveillance system via their smart phone or personal digital assistant (PDA) at a significantly reduced cost.

"MIST Innovations' agreement with Protektar positions MoD II as an industry leader in mobile security monitoring technology," said Craig Capece, president & CEO, MIST Innovations. "There's tremendous potential for a product like MoD II throughout Mexico so we're very pleased about this new relationship."

Protektar SA de CV is a newly formed subsidiary of VedireySA which offers information technology products and services, business consulting. According to the agreement, the company will provide direct sales, installation and support for MoD II as well as sell to security system integrators. MIST Innovations will provide second level support to Protektar.

"This is an opportune time for Protektar to bring MoD II to the public and private sectors in Mexico where security is of great concern and priority," said Francisco Gonzalez, President, Protektar SA de CV. "We are confident that it will be very well received and look forward to this new enterprise."

Protektar will initially focus on government, institutional and national accounts and work to build a network of authorized resellers throughout the security industry in Mexico.

MoD II users connect into their existing security system at any time to watch real-time, streaming video of their businesses. Clients can switch between cameras, showing one location or even look at multiple locations using the product. Additionally, MoD II transmits a picture only when the customer connects into the system, so it does not tie up the cellular network.

This is the second distribution agreement for MIST Innovations. In 2009, the company partnered with ProTel Solutions, a UK-based telecom company, to become the MoD II distributor throughout Europe.
